## Retford Circular Economy Project (RCEP)

SLR Project No.: 425.064852.00001

20 December 2023

Revision: 02

---

**Technical Note:** PFA Laboratory Analysis Results

---

This Technical Note provides a factual summary of the laboratory analysis results obtained for samples of Pulverised Fuel Ash (PFA) collected from the former ash lagoons as part of the Retford Circular Economy Project (RCEP).

## 1.0 Introduction

A ground investigation was completed at the Site in May to June 2021. The scope of work comprised:

- drilling of 23 boreholes using a sonic method (BH1 to BH17, BH20, BH22, BH23, BH25 to BH27) to a maximum depth of 18m bgl (depth determined by underlying Chester Formation) and excavation of 4 trial pits (BH18, BH19, BH21, BH24) to a maximum depth of 4.5m bgl (also determined by the depth to the underlying Chester Formation);
- collection of PFA samples for testing; and
- logging of the PFA, soil and bedrock strata in general accordance with BS5930:2015.

The location of each exploratory hole position is provided as Drawing 01. Exploratory hole logs are provided in Appendix A.

## 2.0 Ground Conditions

The ground conditions encountered were largely consistent across the Site, with similar PFA and underlying geology observed. Significant variation was noted in the thickness of the PFA deposits, particularly between the 'High Rise' in the centre and west (13.4m average thickness) and the 'Low Rise' in the east (3.6m average thickness). Borehole locations and PFA thickness are shown on Drawing 02. A series of select photographs are provided in Appendix B which provide a visual representation of the nature of the ground encountered.

### 2.1 Topsoil/Surface Cover

Topsoil was encountered in all the boreholes drilled. This was generally a brown sandy silt with some fine to medium quartzite gravel, used as a restoration cover/backfill over the top of the PFA. It averaged ~0.3m thickness across most of the Site.

Registered Office:  
7 Worms Park, Menmarsh Road, Worminghall, Aylesbury, HP18 9PH

Registered No.: 3880506

SLR Consulting Limited

The Cursitor, 38 Chancery Lane, London, WC2A 1EN

Tel: +44 203 805 6418 [www.slrconsulting.com](http://www.slrconsulting.com)

The material is consistent with site-won natural materials previously used to construct the lagoon bunds. The landowner has anecdotally confirmed that site-won materials were used to provide the topsoil/surface cover.

## 2.2 PFA

The PFA was observed beneath the entirety of the site. Generally, this was encountered as a soft to firm dark grey slightly sandy silt with occasional dark grey fine sand laminations. The deposit had no observable vertical or lateral variability and was found to be relatively uniform. The visual assessment has been confirmed by the contaminant analysis of the PFA (see Section 7.0). The PFA ranged in thickness from 0.05m (BH21) to 15.9m (BH5). With an average thickness of 3.6m in the 'Low Rise' and an average of 13.4m in the 'High Rise'.

## 2.3 Sandstone

In-situ bedrock of the Chester Formation was observed from depths of between 2.45m bgl to 16.1m bgl. The bedrock was observed at shallower depths towards the east of the Site where the PFA thickness decreases significantly.

BH2, BH8 & BH14 were terminated within the side slope of the sandstone bunds.

## 3.0 Groundwater

Groundwater was encountered beneath the entire Site during drilling, typically 8-10m bgl in the 'high rise' and 2-3m bgl in the 'low rise' areas.

## 4.0 Contamination Observations

During the course of the investigation and the logging of the exploratory hole arisings, no visual or olfactory indications of contamination by hydrocarbons, other chemicals or asbestos were recorded.

## 5.0 Field Sample Collection

Samples of PFA were collected at an approx. vertical sample interval of every ~1.5m. Samples were collected and stored at an off-site location.

## 6.0 Sample Scheduling

PFA samples were collected from each exploratory hole location for a suite of chemical and asbestos laboratory analysis. The samples were selected from each location to provide both lateral and vertical delineation of the PFA. A non-targeted approach was undertaken given the absence of any visual or olfactory indications of contamination recorded during the intrusive works.

The PFA was scheduled for a suite of analysis that comprised:

- asbestos identification and quantification;
- metals<sup>1</sup>;
- poly-aromatic hydrocarbons (PAH)<sup>2</sup>; and
- Semi-volatile organic compounds (SVOC).

PFA samples were also scheduled for leachate analysis that comprised:

- metals<sup>1</sup>;
- poly-aromatic hydrocarbons (PAH)<sup>2</sup>; and
- Semi-volatile organic compounds (SVOC).

The table below shows the number of samples scheduled for each analysis. The full sample schedule is provided in Appendix C.

**Table 1: PFA Contaminant Analysis Schedule**

Laboratory Analysis	No. PFA samples
<b>PFA Solid Matrix</b>	
Asbestos	96
Metals	62
PAH	62
SVOC	62
<b>PFA Leachate</b>	
Metals	25
PAH	25
SVOC	25

The samples were submitted to Element Materials Technology Ltd for analysis, a UKAS and MCERTS accredited laboratory.

## 7.0 Sample Analysis Results

The results of the laboratory analysis are summarised in the sections below. The laboratory analytical report certificates are provided in Appendix D.

<sup>1</sup> Metals suite - antimony, arsenic, barium, boron, cadmium, chromium, cobalt, copper, iron, lead, magnesium, manganese, mercury, molybdenum, nickel, selenium, strontium, titanium, vanadium, zinc

<sup>2</sup> PAH suite - acenaphthene, acenaphthylene, anthracene, fluoranthene, fluorene, naphthalene, phenanthrene, pyrene, benz[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[ghi]perylene, benzo[a]pyrene, chrysene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene

## 7.1 PFA solid analysis

### Asbestos

- 95 no. PFA samples – no asbestos detected (NAD)
- 1no. PFA sample – BH8, 3m-4.5m depth; small fibre bundle <10mm; chrysotile asbestos <0.001% wt/wt.

### Metals

PFA Solid Analysis				
Metal	Minimum (mg/kg)	Minimum (%)	Maximum (mg/kg)	Maximum (%)
Antimony	2	0.0002	10	0.001
Arsenic	11.7	0.00117	232.9	0.02329
Barium	94	0.0094	980	0.098
Boron	1.2	0.00012	119.1	0.01191
Cadmium	<0.1	<0.00001	1.4	0.00014
Chromium	58.2	0.00582	120.4	0.01204
Cobalt	4.9	0.00049	29.2	0.00292
Copper	31	0.0031	155	0.0155
Iron	18900	1.890	112000	11.2
Lead	14	0.0014	117	0.0117
Magnesium	2054	0.2054	8797	0.8797
Manganese	137	0.0137	1149	0.1149
Mercury	<0.1	<0.00001	0.7	0.00007
Molybdenum	4.9	0.00049	12.8	0.00128
Nickel	37.1	0.00371	101.2	0.01012
Selenium	2	0.0002	10	0.001
Strontium	62	0.0062	457	0.0457
Titanium	376	0.0376	1385	0.1385
Vanadium	22	0.0022	280	0.028
Zinc	36	0.0036	239	0.0239

**Note:** data shown as both concentration (mg/kg) and percentage (%) values  
< indicates that the compound is not present above the laboratory limit of detection (LOD)

### Poly-aromatic Hydrocarbons (PAH)

- None of the 62 no. samples contained PAH compounds above the laboratory limit of detection (LOD).

### Semi-Volatile Organic Compounds (SVOC)

- None of the 62 no. samples contained SVOC compounds above the laboratory limit of detection (LOD).

## 7.2 PFA leachate analysis

### Metals

PFA Leachate Analysis				Groundwater Analysis		
Metal	No. Samples	Minimum (mg/l)	Maximum (mg/l)	No. Samples	Minimum (mg/l)	Maximum (mg/l)

Zinc	25	<0.005	<0.005	63	<0.0015	0.021

**Note:** groundwater analysis from boreholes BH03, BH11 and BH23 provided for comparison  
NA indicates no analysis undertaken for that compound

## Poly-aromatic Hydrocarbons (PAH)

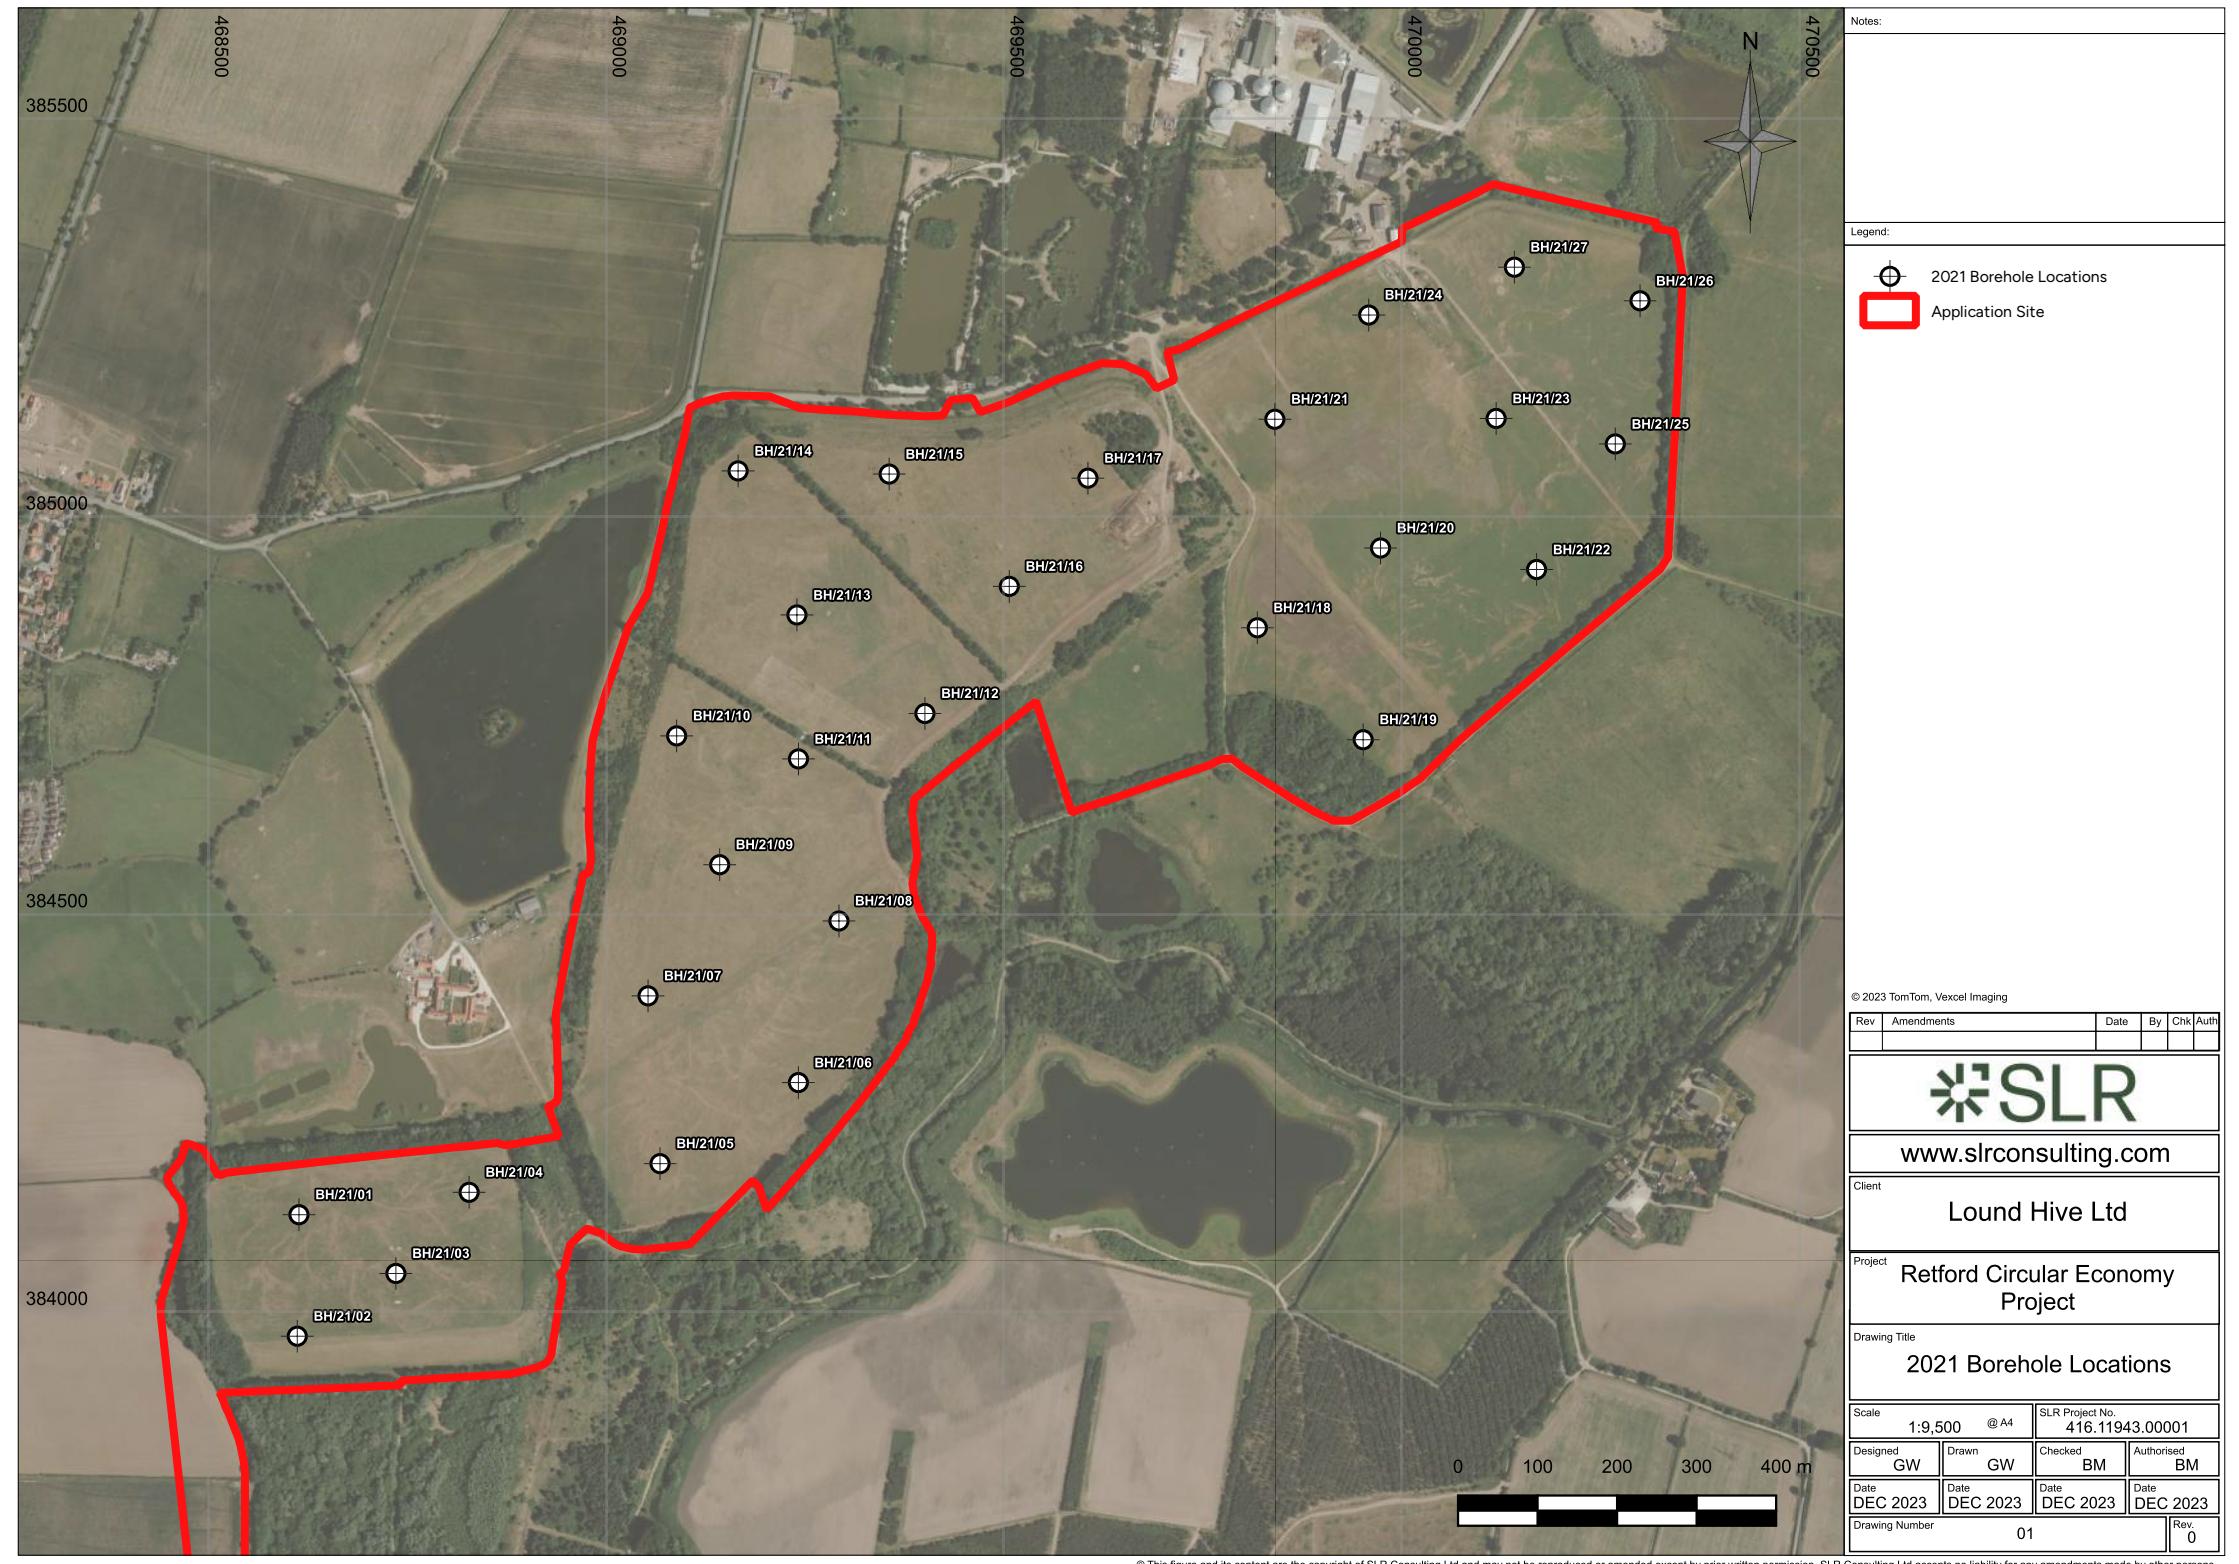

- None of the 25 no. leachate samples contained PAH compounds above the laboratory limit of detection (LOD).

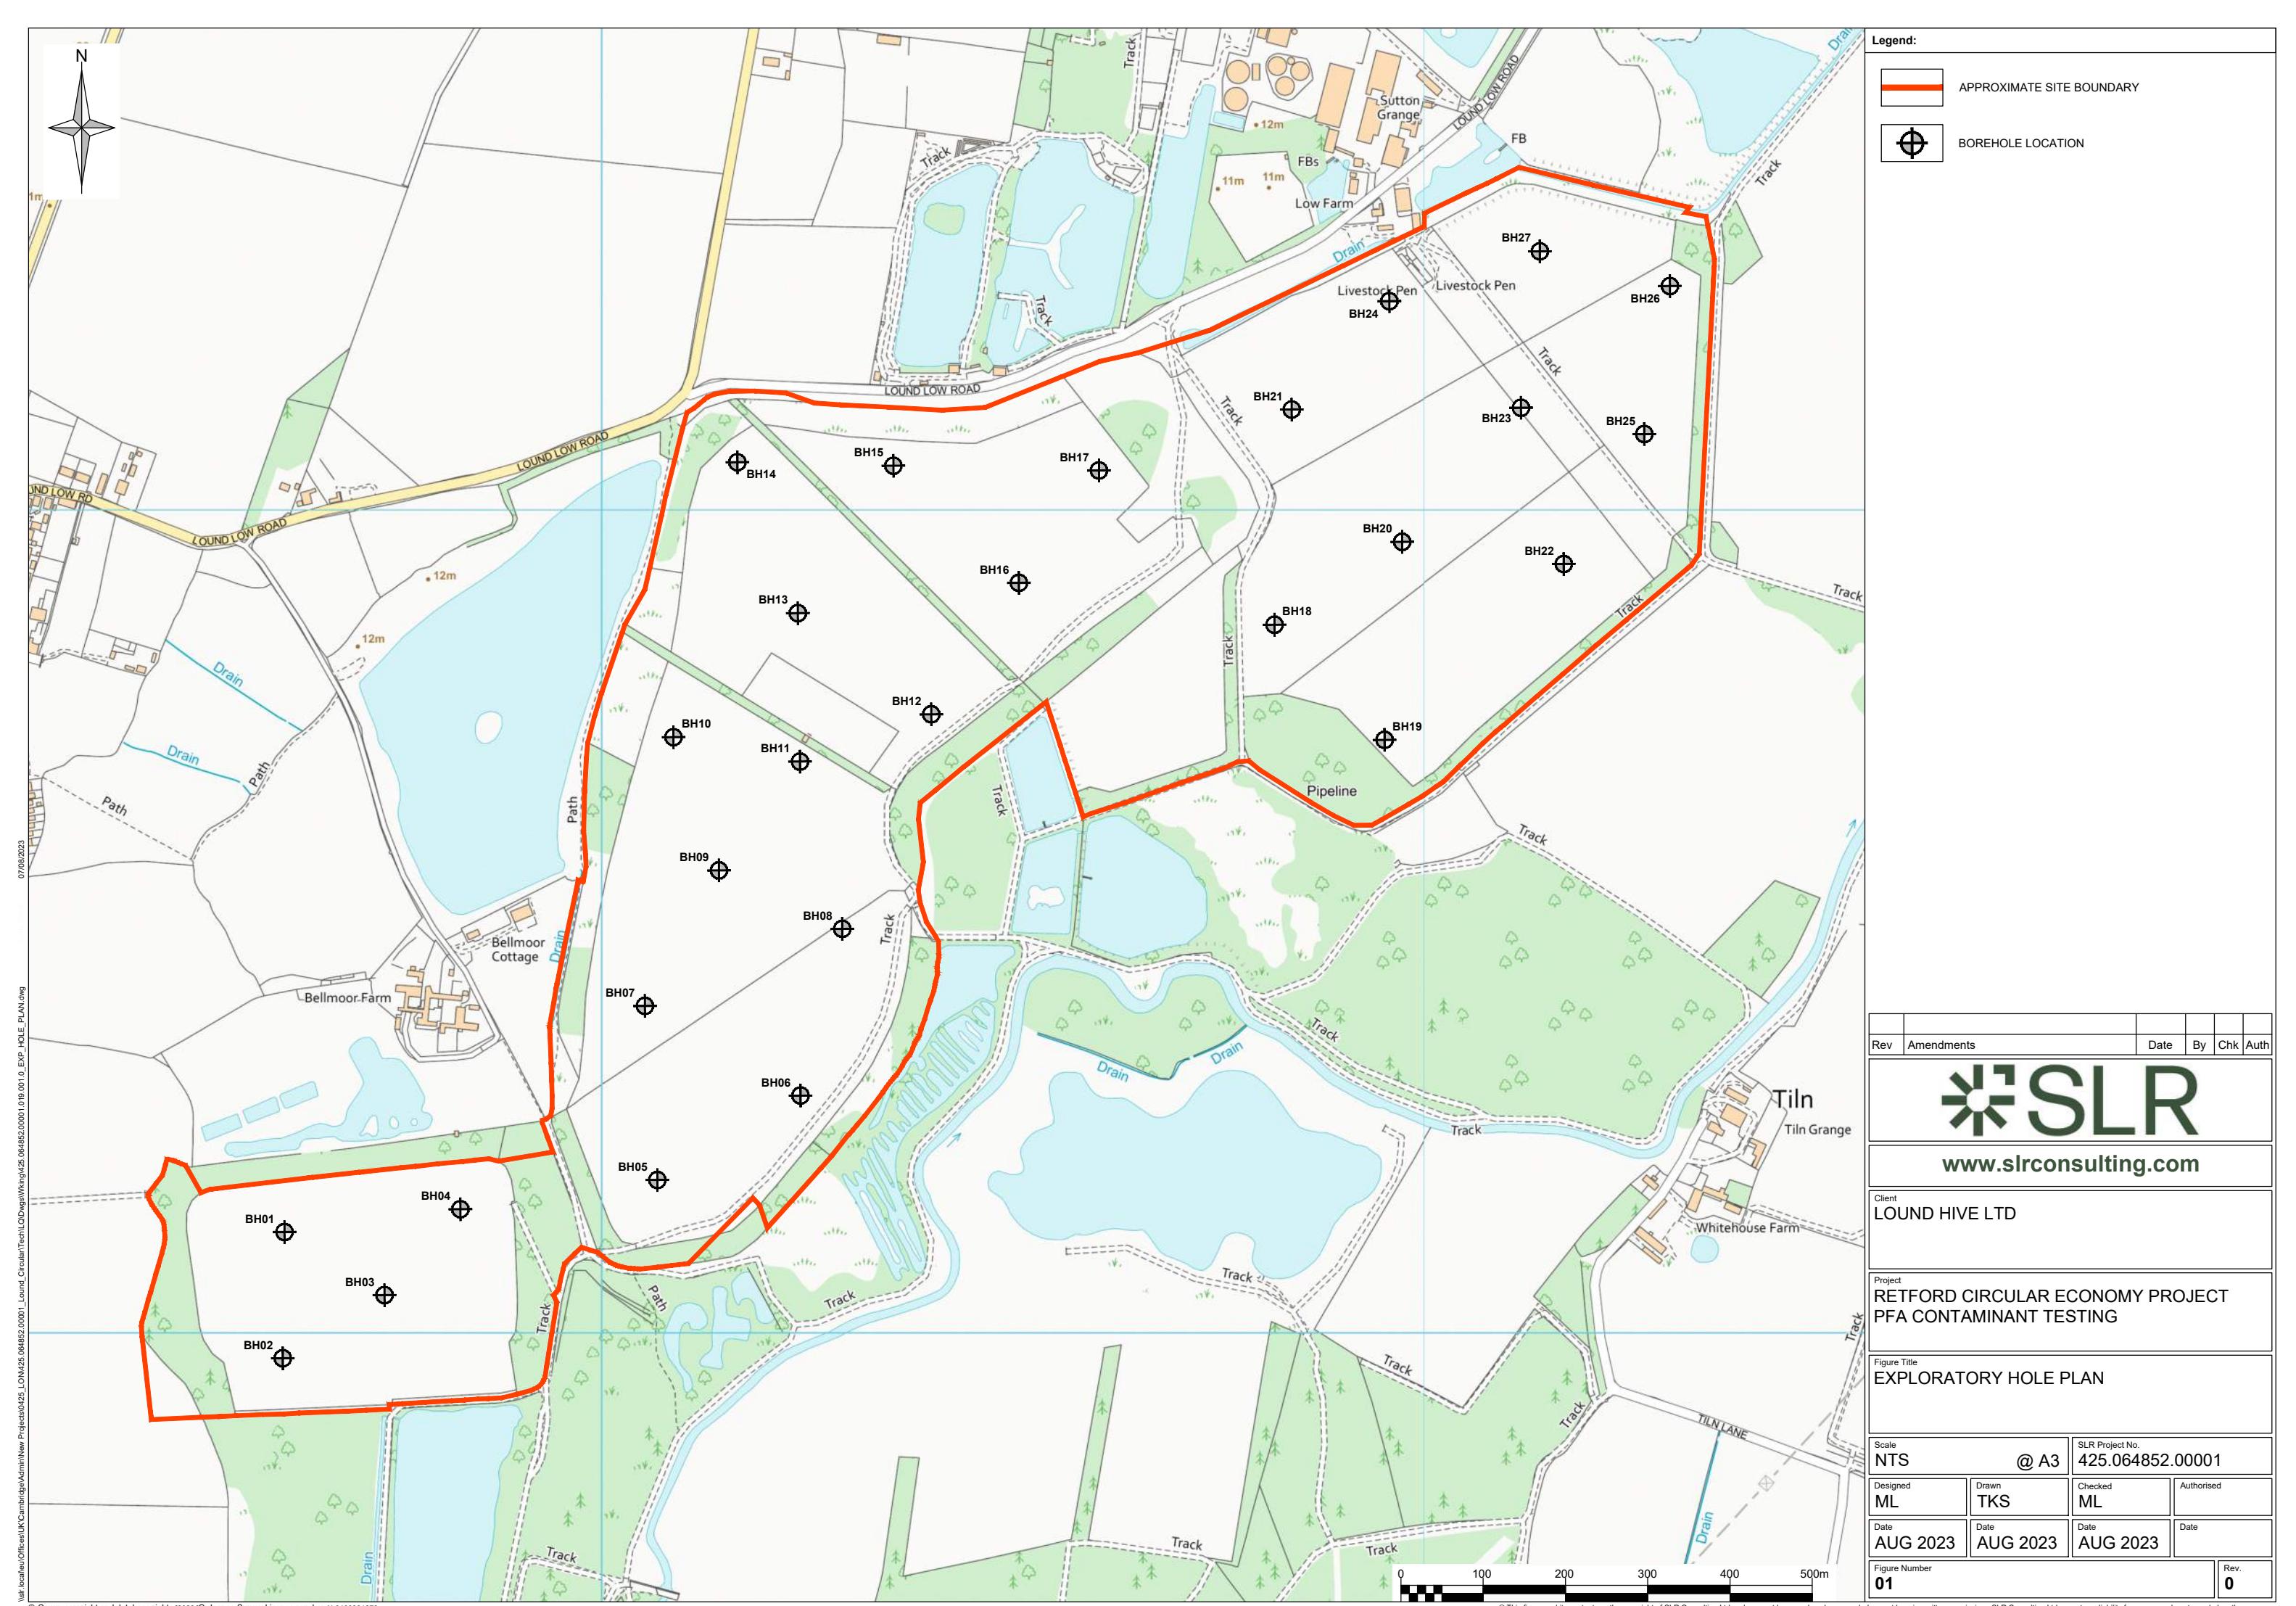

## Semi-Volatile Organic Compounds (SVOC)

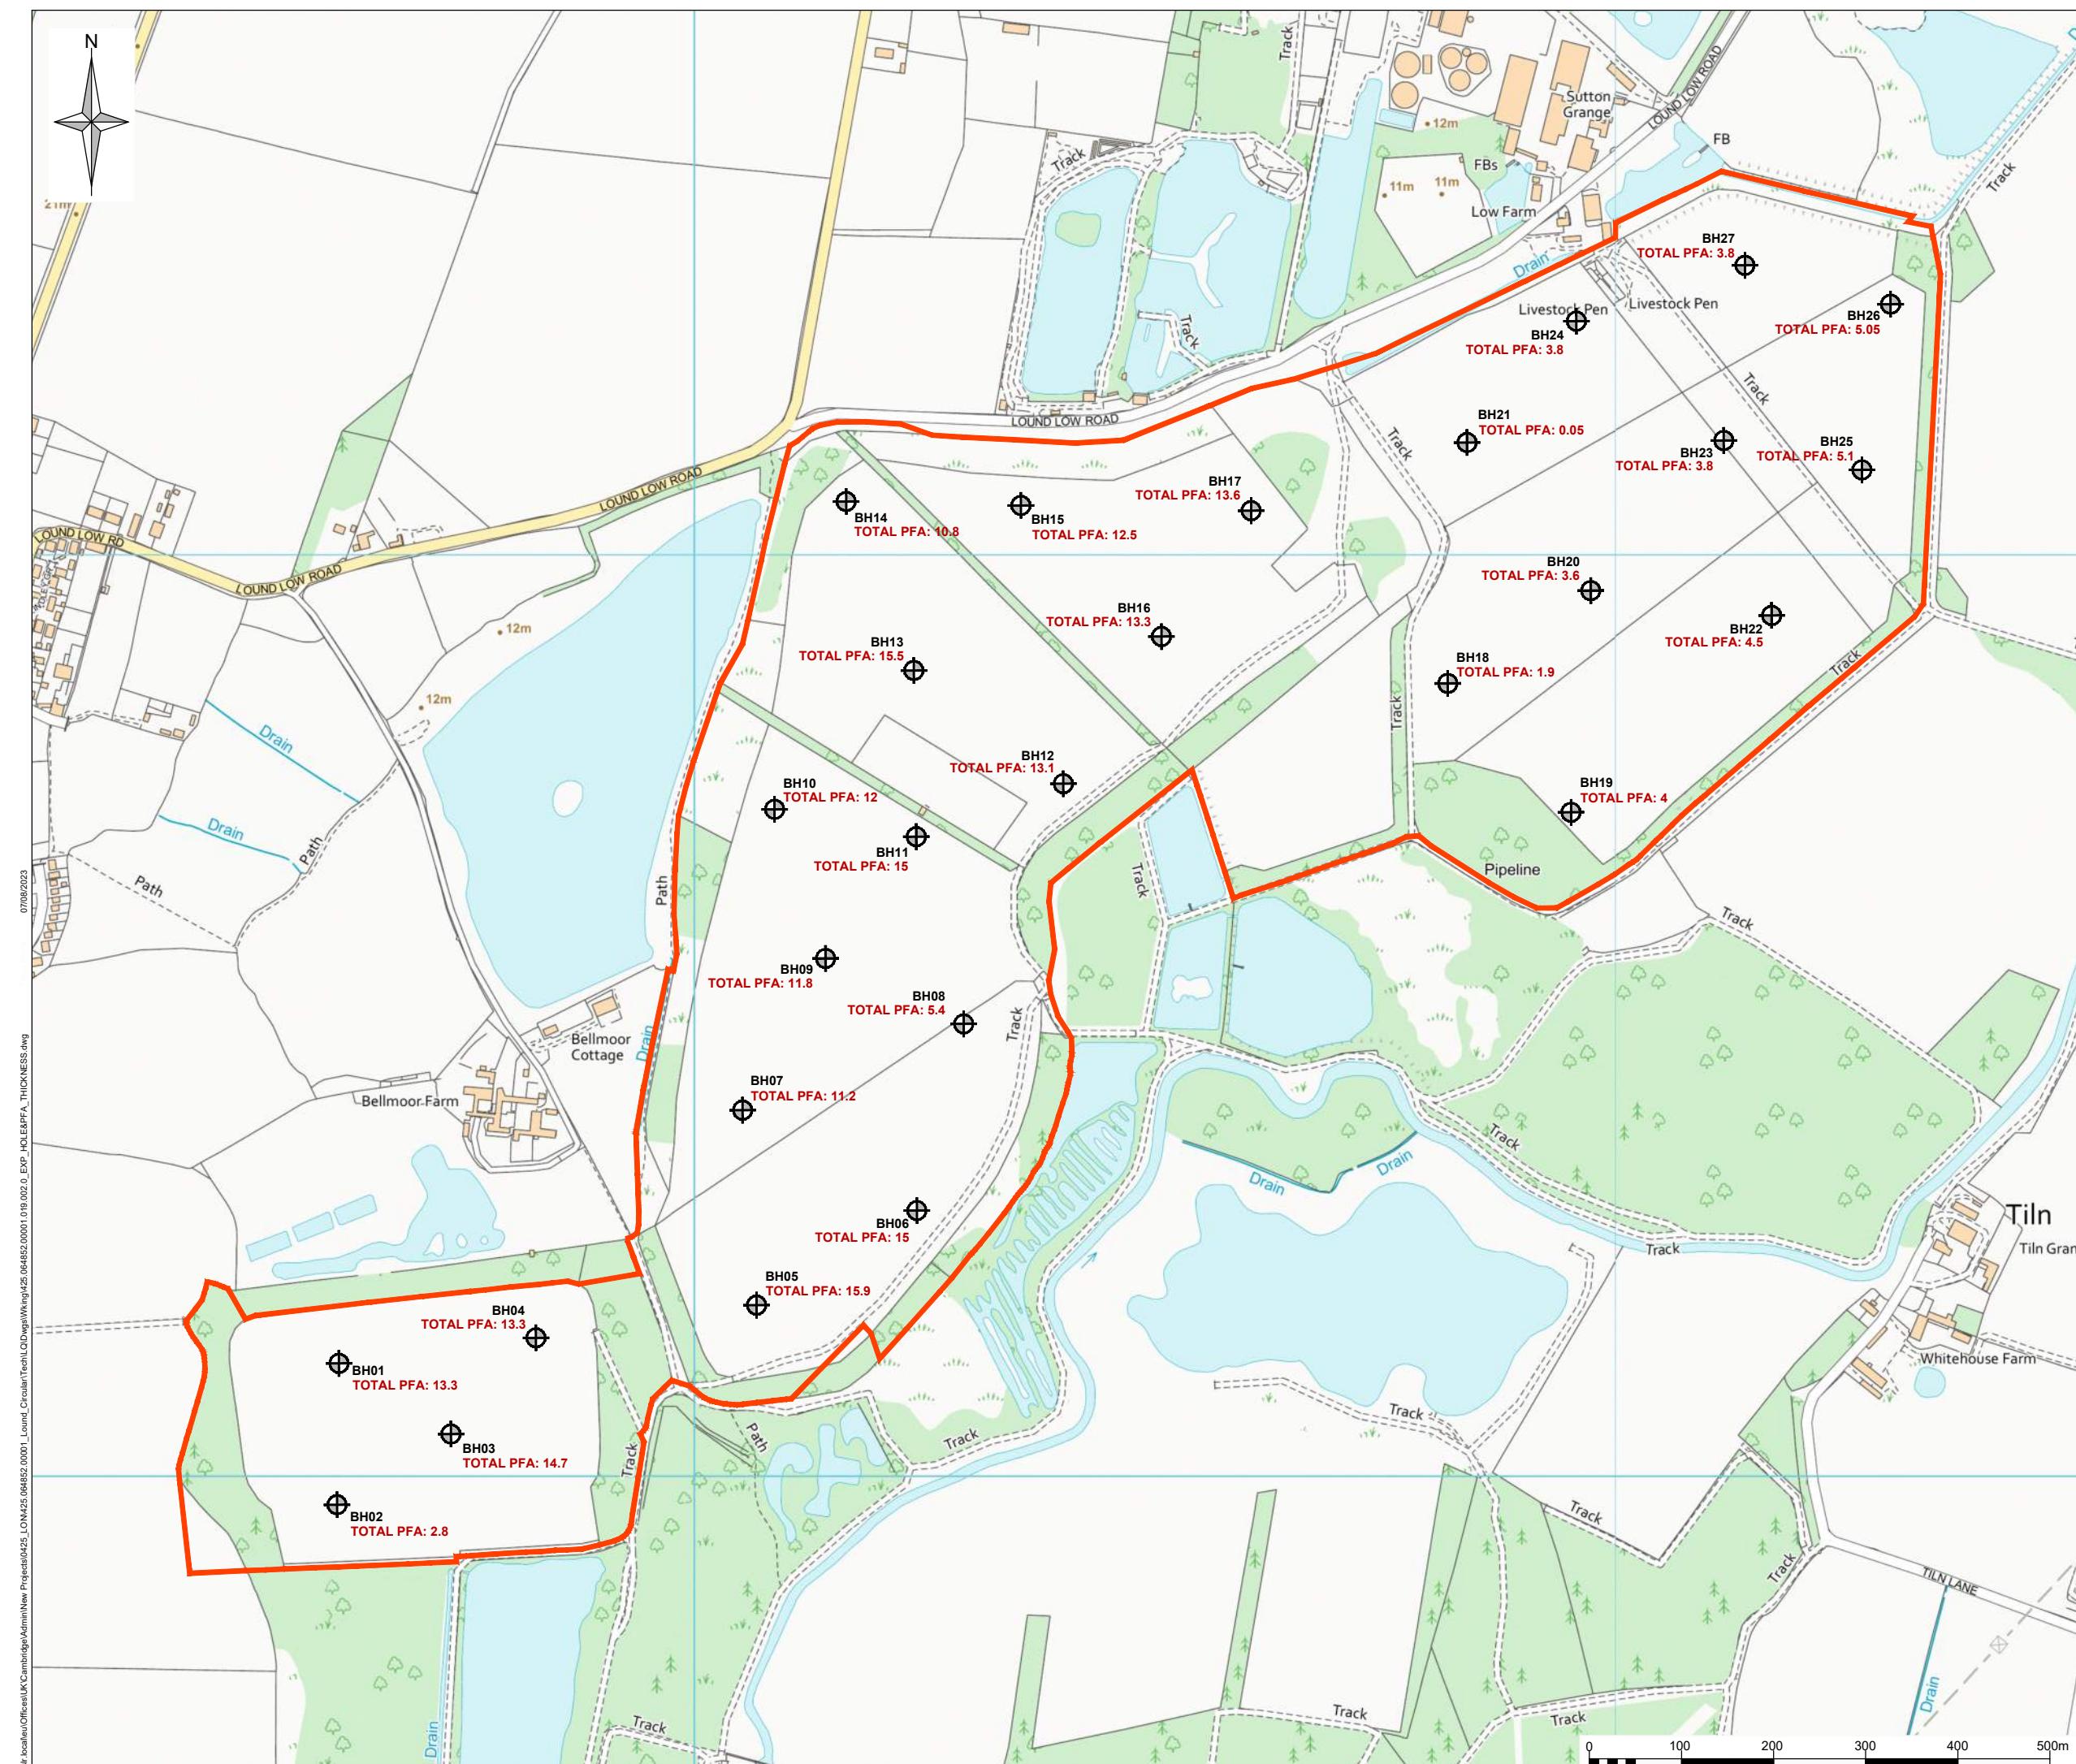

- None of the 25 no. leachate samples contained SVOC compounds above the laboratory limit of detection (LOD).

<b>Attention :</b>	Matt Logan
<b>Date :</b>	21st July, 2023
<b>Your reference :</b>	425.064852.00001
<b>Our reference :</b>	Test Report 23/10769 Batch 1
<b>Location :</b>	Retford Circular Economy Project (RCEP)
<b>Date samples received :</b>	3rd July, 2023
<b>Status :</b>	Final report
<b>Issue :</b>	1

One hundred and forty six samples were received for analysis on 3rd July, 2023 of which ninety six were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.

All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

**Note:**

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Asbestos sub-samples are retained for not less than 6 months from the date of analysis unless specifically requested.

The LOQ of the Asbestos Quantification is 0.001% dry fibre of dry mass of sample.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

Where trace asbestos is reported the amount of asbestos will be <0.1%.

# NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 23/10769

## SOILS and ASH

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary. Asbestos samples are retained for 6 months.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at  $35^{\circ}\text{C} \pm 5^{\circ}\text{C}$  unless otherwise stated. Moisture content for CEN Leachate tests are dried at  $105^{\circ}\text{C} \pm 5^{\circ}\text{C}$ . Ash samples are dried at  $37^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overestimate when other sulphides such as Barite (Barium Sulphate) are present.

## WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

## STACK EMISSIONS

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation for Dioxins and Furans and Dioxin like PCBs has been performed on XAD-2 Resin, only samples which use this resin will be within our MCERTS scope.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

## DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

## SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

## DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

## BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

**NOTE**

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a requirement of our Accreditation Body for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.

Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

Laboratory records are kept for a period of no less than 6 years.

**REPORTS FROM THE SOUTH AFRICA LABORATORY**

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

**Measurement Uncertainty**

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

**Customer Provided Information**

Sample ID and depth is information provided by the customer.

**ABBREVIATIONS and ACRONYMS USED**

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above quantitative calibration range. The result should be considered the minimum value and is indicative only. The actual result could be significantly higher.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x2 Dilution
AB	x5 Dilution

## HWOL ACRONYMS AND OPERATORS USED

HS	Headspace Analysis.
EH	Extractable Hydrocarbons - i.e. everything extracted by the solvent.
CU	Clean-up - e.g. by florisil, silica gel.
1D	GC - Single coil gas chromatography.
Total	Aliphatics & Aromatics.
AL	Aliphatics only.
AR	Aromatics only.
2D	GC-GC - Double coil gas chromatography.
#1	EH_Total but with humics mathematically subtracted
#2	EU_Total but with fatty acids mathematically subtracted
-	Operator - underscore to separate acronyms (exception for +).
+	Operator to indicate cumulative e.g. EH+HS_Total or EH_CU+HS_Total
MS	Mass Spectrometry.

EMT Job No: 23/10769

<b>Attention :</b>	Matt Logan
<b>Date :</b>	31st July, 2023
<b>Your reference :</b>	425.064852.00001
<b>Our reference :</b>	Test Report 23/10769 Batch 1 Schedule C
<b>Location :</b>	Retford Circular Economy Project (RCEP)
<b>Date samples received :</b>	3rd July, 2023
<b>Status :</b>	Final Report
<b>Issue :</b>	1

One hundred and forty six samples were received for analysis on 3rd July, 2023 of which one was scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.

All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

**Authorised By:**

**Paul Boden BSc**  
Senior Project Manager

Please include all sections of this report if it is reproduced

**Client Name:** SLR Consulting Ltd  
**Reference:** 425.064852.00001  
**Location:** Retford Circular Economy Project (RCEP)  
**Contact:** Matt Logan

**Note:**

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Asbestos sub-samples are retained for not less than 6 months from the date of analysis unless specifically requested.

The LOQ of the Asbestos Quantification is 0.001% dry fibre of dry mass of sample.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

Where trace asbestos is reported the amount of asbestos will be <0.1%.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analyst Name	Date Of Analysis	Analysis	Result
23/10769	1	BH8 T3	3.00-4.50	157	Matthew Turner	31/07/2023	Total ACM Gravimetric Quantification (% Asb)	<0.001 (mass %)
					Matthew Turner	31/07/2023	Total Detailed Gravimetric Quantification (% Asb)	<0.001 (mass %)
					Matthew Turner	31/07/2023	Total Gravimetric Quantification (ACM + Detailed) (% Asb)	<0.001 (mass %)

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 23/10769						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

**Only analyses which are accredited are recorded as deviating if set criteria are not met.**

# NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 23/10769

## SOILS and ASH

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary. Asbestos samples are retained for 6 months.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at  $35^{\circ}\text{C} \pm 5^{\circ}\text{C}$  unless otherwise stated. Moisture content for CEN Leachate tests are dried at  $105^{\circ}\text{C} \pm 5^{\circ}\text{C}$ . Ash samples are dried at  $37^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overestimate when other sulphides such as Barite (Barium Sulphate) are present.

## WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

## STACK EMISSIONS

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation for Dioxins and Furans and Dioxin like PCBs has been performed on XAD-2 Resin, only samples which use this resin will be within our MCERTS scope.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

## DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

## SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

## DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

## BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

**NOTE**

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a requirement of our Accreditation Body for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.

Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

Laboratory records are kept for a period of no less than 6 years.

**REPORTS FROM THE SOUTH AFRICA LABORATORY**

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

**Measurement Uncertainty**

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

**Customer Provided Information**

Sample ID and depth is information provided by the customer.

**ABBREVIATIONS and ACRONYMS USED**

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above quantitative calibration range. The result should be considered the minimum value and is indicative only. The actual result could be significantly higher.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

## HWOL ACRONYMS AND OPERATORS USED

HS	Headspace Analysis.
EH	Extractable Hydrocarbons - i.e. everything extracted by the solvent.
CU	Clean-up - e.g. by florisil, silica gel.
1D	GC - Single coil gas chromatography.
Total	Aliphatics & Aromatics.
AL	Aliphatics only.
AR	Aromatics only.
2D	GC-GC - Double coil gas chromatography.
#1	EH_Total but with humics mathematically subtracted
#2	EU_Total but with fatty acids mathematically subtracted
_	Operator - underscore to separate acronyms (exception for +).
+	Operator to indicate cumulative e.g. EH+HS_Total or EH_CU+HS_Total
MS	Mass Spectrometry.

EMT Job No: 23/10769

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/S ANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
